# VOICE OVER FUNCTION ON IOS (Version 15.5)

For the IOS operating system, there is also a voice over function as in its MAC OS counterpart.

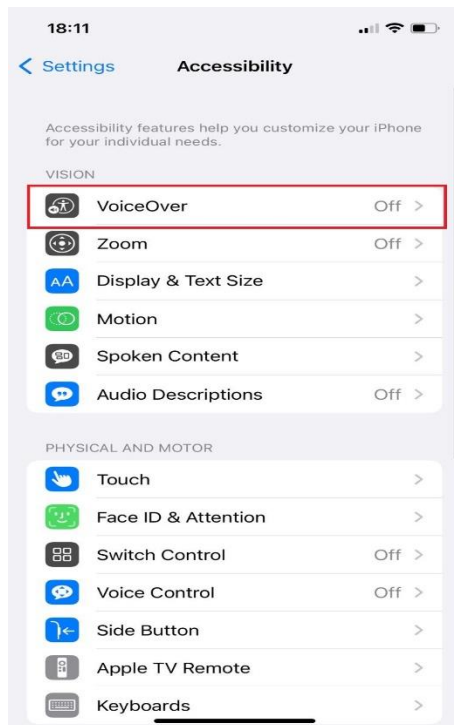

To enable it, just ask Siri to enable this function.

If you want to enable it manually, follow the following steps:

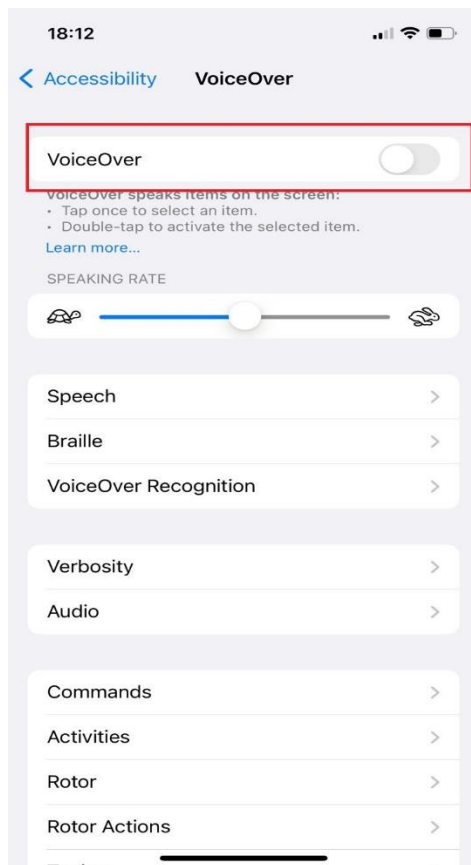

1. Go to settings
2. Search for the accessibility option

3. VoiceOver

4. And then activate the function

5. Then a voice will indicate us that the tool is enabled

Now, every time you scroll down, the device will give us a tactile response which indicates that there is an element to read.

To choose an option, double tap the screen to accept.

To disable the tool just ask Siri.
